

CODE: .....

S. No. 3877

**The LNM Institute of Information Technology, Jaipur**

(Deemed to be University)

**Instruction to Candidate (for examination)**

1. Immediately on receipt of the Test Booklet the candidate will fill in the required particulars on the cover page with Ball Point Pen only.
2. Candidates shall maintain perfect silence and attend to their Question Paper only. Any conversation or gesticulation or disturbance in the Examination Room / Hall shall be deemed as misbehaviour. If a candidate is found using unfair means or impersonating, it shall be treated as breach of code of conduct and the matter dealt with accordingly.
3. No candidate, without the special permission of the Invigilator concerned, will leave his/her seat or Examination Room until the full duration of the paper is over. Candidate should not leave the room / hall without handing over their Answer Sheets to the Invigilator on duty.
4. During the examination time, the invigilator will check ID Card of the candidate to satisfy himself / herself about the identity of each candidate. The invigilator will also put his/her signature in the place provided in the Answer Sheet.
5. The Candidate shall fill the number of supplementary sheets attached, on the front page of the main answer sheet.
6. **Bringing cell phones /communication devices in the examination hall is strictly prohibited. Exam conducting authority will not be responsible for the custody of such articles. However, use of scientific calculator is permitted.**

Philosophy

Name of the student: Abhishek Sharma.

Roll No.: Lecture Notes

Name of Examination: .....

Subject: Embedded Systems

Day &amp; Date: .....

No. of Supplementary Sheets Attached: .....

Student's Signature

| Question No. | Marks Obtained |
|--------------|----------------|
| 1            |                |
| 2            |                |
| 3            |                |
| 4            |                |
| 5            |                |
| 6            |                |
| 7            |                |
| 8            |                |
| 9            |                |
| 10           |                |
| Total Marks  |                |

# Atomic Operation

⇒ One that is guaranteed to terminate and is indivisible when applied to either examining a program variable, or modifying the state of such program.

Keyword:- indivisible and irreducibility.

- The value of variable Count on which task accesses it and in which order.
- we want to prevent access by all other process.

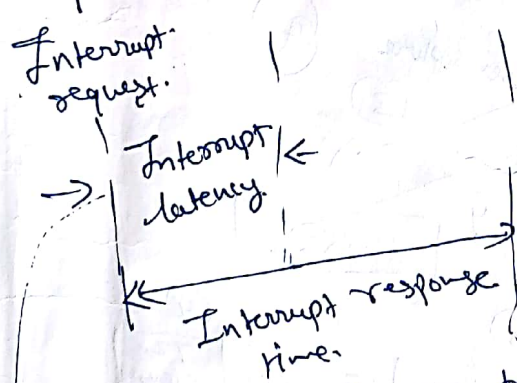

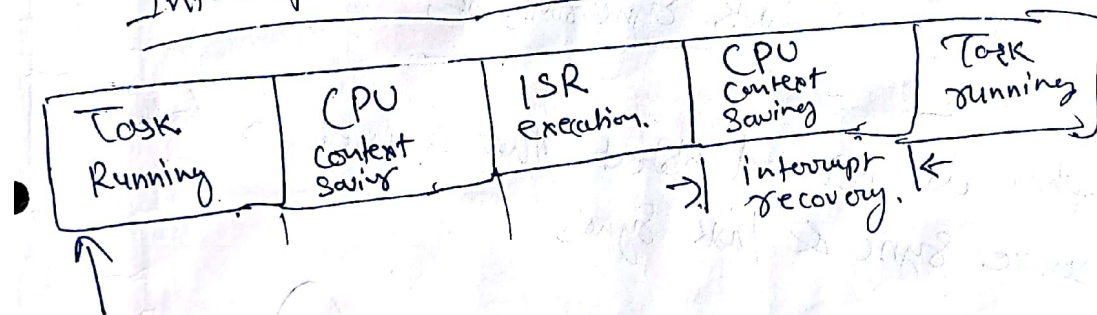

Mutually exclusive access.

⇒ Sharing of resource or to common data gives rise to one form of Synchronization. That is called mutual exclusion. Synchronization.

⇒ Conditional Synchronization :- process delay or block until a specified Count is true (or false)

⇒ "goal is to make sure that two processes are not in their critical sections at the same time."

## Interrupt Service Routing.

IRT ⇒ time req for CPU to return to the interrupted code/highest priority. task is called IRT recovery.

⇒ IL ⇒ max time for which interrupt are disabled + time to start the exec<sup>n</sup> of the 1<sup>st</sup> instruction in ISR

Interrupt response time :- Time b/w receipt of interrupt signal & starting the code that handles the interrupt.

# Semaphore

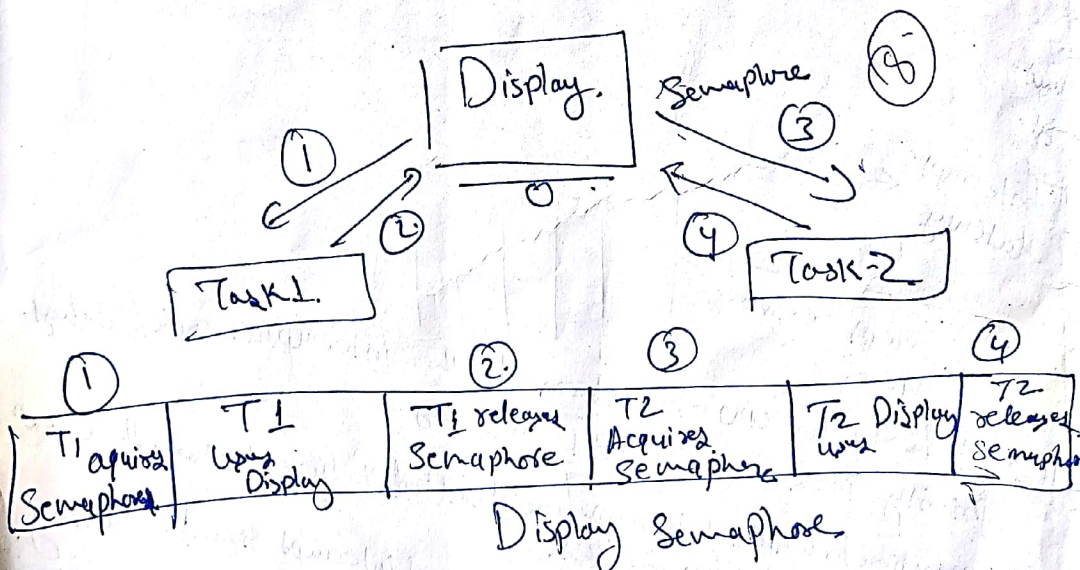

Resource Synchronization.

Task Synchronization

Semaphore is a kernel object. That is used for both resource sync & task sync.

Task 1

Task 2

Task n

## Counting Semaphore

→ binary Semaphore

→ counting Semaphore

Mutex ⇒ mutual exclusion  
 ⇒ resource and task synchronization.  
mechanism:

① Disabling the scheduler:- Scheduler does the task switching.  
 ⇒

② Disabling the interrupt ⇒  
 ⇒ DI, execute critical section of code. for using shared resource  
 then EI

③ Test and set Operations:-

1<sup>st</sup> check the value of G.V to obtain the status of shared resource.

e.g if G.V is set to 0 if resource can be used  
 1 if can't be used.

Mutex are special binary Semaphore. Could be in locked/unlocked state.

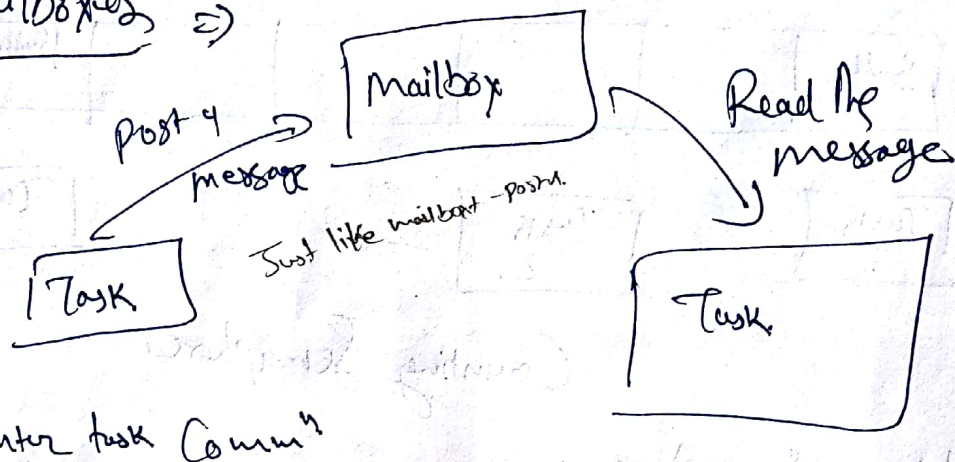

→ It will have an owner

→ Owner can acquire a mutex multiple times. in locked state.

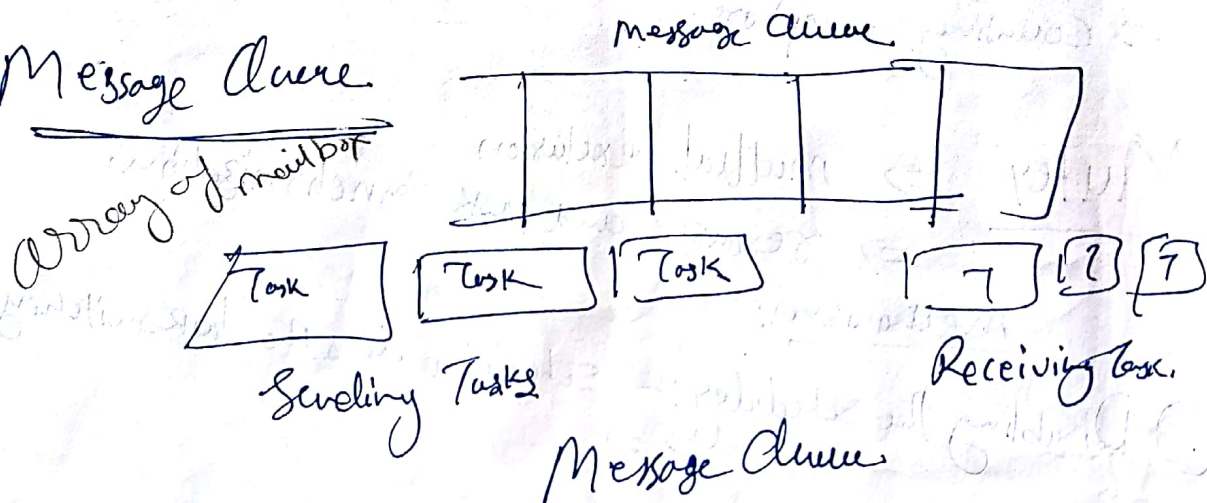

→ A task owning mutex can be deleted

→ Mutex support priority inheritance to avoid priority inversion prob

# Mailboxes $\Rightarrow$

## Message Queue

Can be considered as an array of mailboxes.

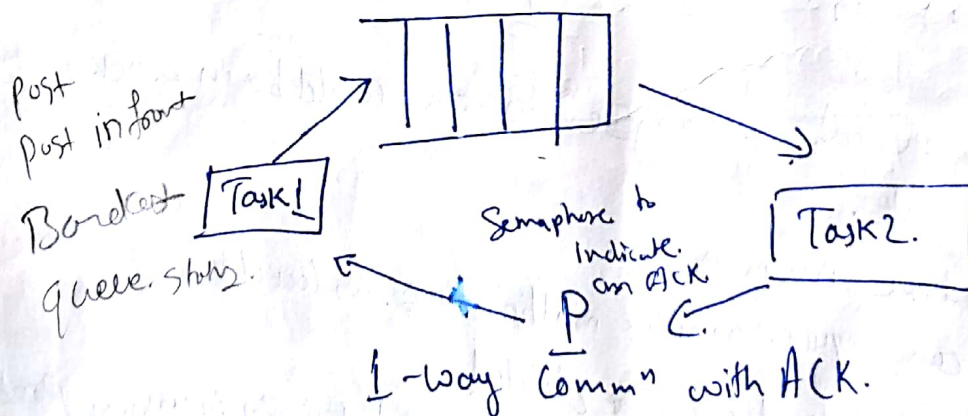

App<sup>n</sup> :- Taking the I/P from keyboard

To display O/P.

Reading voltages from sensors & transmitting

Data packet transmission in a network

Task of I/O  
deposit msg in  
msg queue.

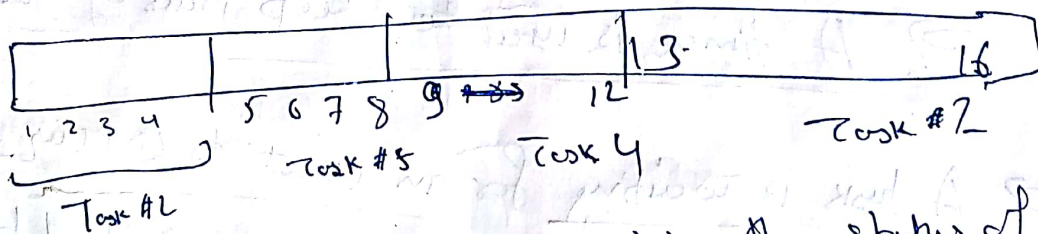

## Broadcast Comm

## Event Register's

each bit can be obtain the status of an event.

Task can have event Reg & Set/~~Reset~~<sup>clear</sup> the bit

# Signals

↳ Passed to indicate an event

↳ Kill - 9 879

Signal no. → process ID

## timers ⇒

↳ measure the elapsed time of an event.

In kernel (keep track of different times)

⇒ A timer is used to keep track of periodicity

⇒ A task is waiting for an event to occur.

if event doesn't occur for specified time

it has to take appropriate action.

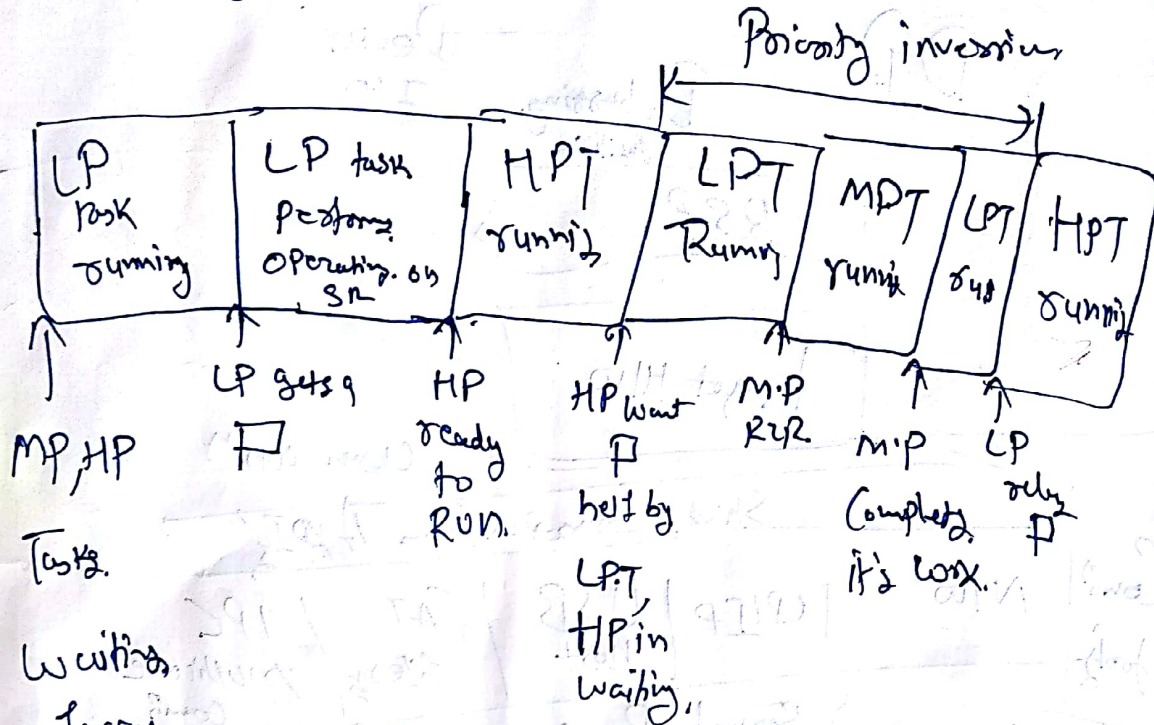

⇒ A task may be waiting in a queue for a shared resource. if resource

is not available in specified time, take appropriate action.

~~Memory~~ ③

## Priority Inversion Problem

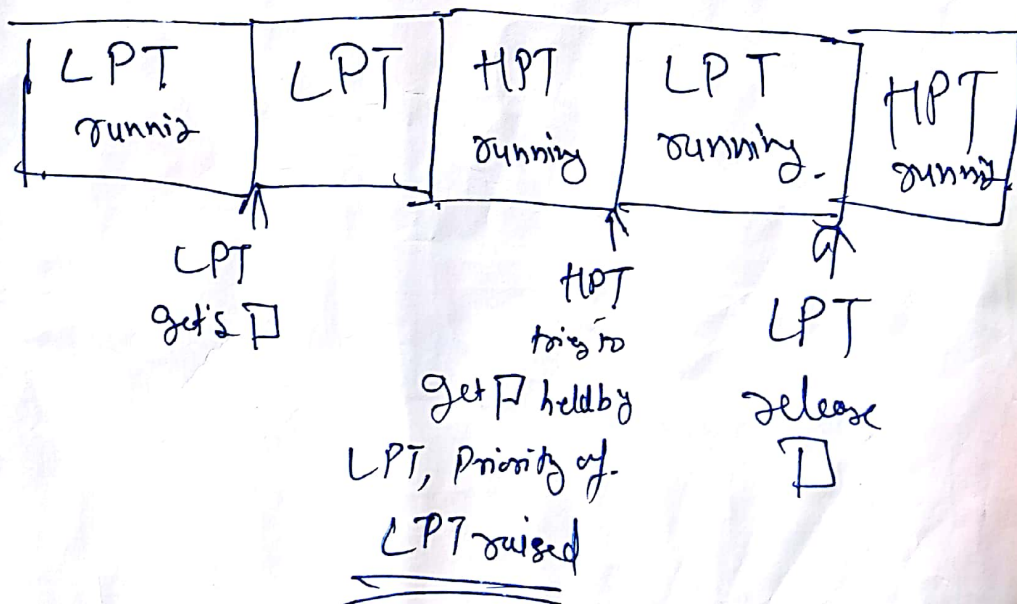

Waiting

for an

event to occur.

Priority inversion coz priority of LPT & HPT are inverted.

## Priority Inheritance

N/w  
protocol.

Bit Rate

↓

Seq of data. in bps.

Baud Rate  $\Rightarrow$  French engineer. Emile Baudot

5-bit teletype. code.

Baud rate refers to the no. of signal or  
Symbol changes that occur per second.

e.g. 2400 Baud rate means.

that the channel can change state 2400 times  
per second.

Non-preemptive. Once a process starts to execute till termination.

Preemptive. - process can be interrupted by another process in mid of its execution.

This is what happened !!

Priority (H) > Priority (M) > Priority (L)
